RESUME

EDUCATION

B.Tech(AI&DS) - Sri Eshwar College of Engineering	CGPA:8.1	2024-2028
SSLC – Govt.Boys.Higher Secondary School	79.2%	2021-2022
HSC – Sowdambikaa Matriculation Higher Secondary School	86.2%	2022-2024

PROJECT 1: AI-POWERED TARIFF IMPORT IMPACT SYSTEM

AI-Powered Tariff Import Impact Simulator is a full-stack web application developed using the MERN stack (MongoDB, Express.js, React.js, and Node.js) to analyze and simulate the impact of import tariffs on business operations. The system enables users to input tariff rates and import-related data, generating detailed analyses of potential effects on product costs, revenue, profitability, and overall business risk. Interactive dashboards and data visualizations were implemented to help users understand tariff impacts effectively, while MongoDB was used to store simulation records and historical analysis data for future reference.

PROJECT 2: PETPALS MANAGEMENT SYSTEM

PetPals Management System is a web-based application designed to simplify pet adoption and pet care management. It enables users to browse available pets, submit adoption requests, manage pet records, and allows administrators to oversee pets, users, and adoption processes through a centralized dashboard. The system improves the efficiency of pet shelter operations while making the adoption process easier and more transparent.

Tech Stack: HTML, CSS, JavaScript, Bootstrap, PHP, MySQL, XAMPP (Apache Server), phpMyAdmin, Visual Studio Code, Git & GitHub.

PROJECT 3: SMART EV-SHEILD

Smart EV Shield is an intelligent EV battery safety and monitoring system designed to detect battery abnormalities such as overheating, voltage fluctuations, and potential faults in real time. It continuously monitors battery health using IoT sensors, provides instant alerts, isolates the battery during critical conditions, and stores data on the cloud for remote monitoring and predictive maintenance, improving the safety and reliability of electric vehicles.

Tech:ESP32, Arduino IDE, C++, Wokwi, DHT22 Sensor, OLED Display (SSD1306), Relay Module, Buzzer, LEDs, Wi-Fi, Node.js, Express.js, Supabase (PostgreSQL), HTML, CSS, JavaScript, Git & GitHub.

INTERNSHIP

Algotutor

Completed a MERN Full Stack Development Internship at AlgoTutor Academy, gaining practical knowledge and hands-on experience in full-stack web development using MongoDB, Express.js, React.js, and Node.js. Participated in real-time project development, worked on frontend-backend integration, developed an understanding of REST APIs and database management, and gained exposure to modern web development practices and application workflows.

Agentic AI

Completed an Agentic AI Internship at Aptitude Guru, gaining hands-on experience in developing intelligent AI applications using Python, Machine Learning, and Large Language Models (LLMs). Worked on real-world projects involving data preprocessing, model training, AI workflow automation, prompt engineering, and REST API integration. Strengthened skills in Agentic AI concepts, machine learning, AI model integration, and intelligent application development.

CERTIFICATIONS:

Introduction to C Sololearn	2025
Completion of C++ Training	2025
Mastering Data Structures and Algorithms using C and C++ Udemy	2025
Mernstack,Java Oracle,Design Thinking-Nptel	2025

CODING PROFILES LEETCODE : 150+ problem Solved

SKILLRACK : Solved 580+ problems

HACKERANK:Started to Solving

SKILLS

Programming - C | C++(learning) | Python(learning)

Core Concepts – Data Structures

Web Technologies - HTML | CSS | JavaScript

Tools - VSCode | Canva | Excel | PowerPoint | Jupyter Notebook | GitHub | Git | Replit | Codeblocks
